In stove furniture there is the usual array of pots, kettles and pans, plain and marbelized. A new article of stove furniture, called the Safety Broiler, should be in every house. It is the most complete invention for broiling and toasting ever invented. There is no waiting for bright fires, it can be used at once, no matter how fresh the fire may be. It is so constructed as to prevent the gas and other products of combustion from tainting the look to comply with any demand, and is just as easy to keep in order as the commonest article of stove furniture. Stove brackets are another very useful invention of recent date. They can be applied to any stove of whither patron, and are a decided convenience for keeping dishes warm that have to wait for laggard members of the family.
